Back-end Developer born on December 10, 2004, in Khorezm. Passionate about solving real-world problems through efficient and practical coding solutions. Known for writing clean, maintainable code and delivering high-quality applications. Strong communication skills and the ability to build positive, collaborative relationships with team members.

PROJECTS

Avtosalon Admin Panel — Personal Project

| Github Link

Node.js, Express.js, MongoDB, Mongoose, JWT

- Developed an admin panel for a car dealership using Node.js and Express.js, with MongoDB and Mongoose for structured and efficient vehicle and user data management.

- Designed and implemented secure CRUD operations for managing car listings, ensuring accuracy and reliability in data processing.

- Integrated user authentication features, including login, registration, and logout, using JWT for secure access control.

- Implemented a search system to help admins efficiently find vehicle records, improving workflow and usability within the admin panel.
